Definition

Tools are the resources used to develop the design and construction of a project, that do not become a permanent part of the facility, including computer systems, vehicles, scaffolding and other items needed to execute the processes and procedures relating to the life cycle of a construction entity.

Examples

Computer Hardware, CAD Software, Temporary Fencing, Backhoe, Tower Crane, Site Drainage Equipment, Formwork, Hammer, Light Truck, Site Hut

Table Uses

Specifying and estimating construction and maintenance costs for building elements, identifying the tools needed and estimating their associated costs in the performance of specified procedures, project management and planning.

Table Users

Cost estimators, facility managers, specifiers, designers, draftspersons, contractors, project managers.

Legacy Documents

- AIA Information Classification System, Part 2, Hierarchical Listing, May 1, 1989
- ISO 12006-2 Table 4.14 Construction aids (by function)
- Uniclass Table M - Construction Aids
